Natural Draft Cooling Towers Manufacturer India

The **Natural draft cooling towers** are particularly pretty as a cost-saving solution for power plants and other industrial plants requiring larger quantities of cooling water. Natural Draft cooling tower operates without fans and Fills, the large amount of electric power or else required for large cooling tower systems is not required.

The mandatory cooling air is pass on through the tower by natural draft henceforth neither fan nor fan power is required for these kind of Cooling Solution. No maintenance required like other Wet (or) Dry Cooling Towers. By using of Non clock nozzle are easy to cleaning reqduce spillage and evaporation loss. Hot Dipped Galvanized Structural's and S.S.fasteners increase the lifetime as well as the efficiency of the cooling tower it can be installed for any range of cooling application.

Features and Functions of Natural Draft Cooling Towers

Natural Draft Cooling Tower especially hold attraction as solution for saving costs for large industrial plants and power stations; that require large amounts of cooling water.

The needed cooling air is transported to the tower with the help of natural draft. Hence there is no necessity for fan or fan power. It is also used for the release of treated exhaust gas. It also implies that there is no need of gas reheating or chimney. PVC Fills, motor, fan are not required by Natural Draft Cooling Towers. FRP Louvers that are specially designed aerodynamically, minimize evaporation loss and spillage.
